19910 SHELDON BI-LEVEL PROJECT CENTER

46" L. X 30" W. X 25-1/2" to 30-1/2"H. Shall be for four-student use, to have secured adjustability and to have two (2) work positions. The basic sitting position for study, lecture, reading and writing is 26" high with level top. The standing height position for laboratory is 31" high with level top.

The top section is in two parts with the upper being movable and adjustable and of 3/4" thick laboratory top with locking bar mechanism and locking blocks. The lower part is the center frame and encloses the manually operated mechanism, the locking tabs, and the resting grooves.

All the manually operated mechanisms are securely locked into a rigid position when in use. When the locking bar and locking tabs are engaged, the unit is secured into a single assembly allowing the center to be moved about or lifted off the floor. The locking bar should be operated by two students.

Assembly consists of four removable clamp-style upright rods, two cross bars and four connectors.

Imprinted Top - Measuring units are permanently printed on the plastic sheet which is overlaid with clear melamine. Check points and computations can be made directly on the surface with a crayon or grease pencil, and a damp cloth wipes everything clean. Included are linear scales, grids and squares, diagonals, circles, protractors--practically everything your students need for measuring off material, squaring it up, folding it down.
